Solidification results J34480-1 UDS Level 2 Report Prelim Report.pdf
T#393 uncharacterized material sample results.pdf
2014_05_07_13_14_24.pdf

Here are some more sample results. Tank 393 was described to me as containing a glycerin dust suppressant so it is not the same material (Crude MCHM). I also attached a mod for the Charleston landfill.

I ended up with a scanned copy of one DSI mod that includes the MSDS sheets. Let me know if you change your mind and want it. The attachment is kinda big though...

Our sample of Crude MCHM went to the lab this AM. pH was taken in the field and was neutral. Just some FYI. Thanks for the help with this. Let me know if you need anything else.

Thanks. I don't need the MSDS sheets. Interesting about Charleston. Even after all this publicity, no one has started to complain!

From what I could tell it was MSDS sheets. I saw the paper copies, but they were not included in the PDFs that were sent to me. I can gather them if you like.

Also...for some FYI...Charleston's Landfill received similar modifications and accepted impacted soil and sorbent. There have been no issues (civil suits) there. Just something to consider. Joe.

Joe,

I got all six emails. Thanks for sending all of this material. This will help a lot.

Regarding the two permit modifications: the documents state that WVDEP's Solid Waste Program reviewed information submitted by Disposal Services, Inc. Do you have any idea if they submitted any data for the permit modification application?

Thanks,

Rick
